

## DREAMHACK - GROWING WITH INTINOR AS PARTNER

DreamHack is probably most known for arranging the world's largest LAN party. In recent years it has grown strongly as an organizer of digital festivals and tournaments in e-sports. With the help of broadcast equipment from Intinor DreamHack supplies content and live broadcasts to partners around the world – for broadcast as well as webTV. The technical solution is based on Intinor proprietary platform Direkt series. To meet the severe coded material and the requirements DreamHack sets of quality, Intinor Direkt links in the extra powerful 2u rack-units with extra high performance is used.

This gives DreamHack possibility at the same machine to work with multiple encoders in high-quality for broadcast and webTV. Furthermore, the units are equipped with solid-state drives for recording. Overall, this gives DreamHack a rational workflow by co-locating functionality on one platform, rather than, as previously, on several separate machines. Additionally saves both the site and electricity consumption. Live broadcasts, which often run around the clock during an event, are often sent via Direkt router to various recipients who are placed with broadcast companies.

*"Besides the functionality the platform offers, DreamHack is very pleased to be able to deliver the very best picture quality in the world."*

- Bas Bruinekool, Technical Director at DreamHack
